Nice, France, 2024

This is the revolution of digital canvases, **an innovative technology** that is redefining the concept of contemporary art collecting, bringing this new artistic expression into people's homes. As captivating as a physical canvas, but with an unprecedented level of dynamism.

Thanks to ultra high definition screens, every detail comes to life with vibrant colors and astonishing realism, creating an immersive and engaging experience. **No longer just static images, but artworks that move and tell stories in a completely new way.**

Vision Frame Screens – Zanini Arte Gallery

This technology is still a groundbreaking **novelty** in the art market, and our gallery is among the first to offer it, giving collectors the opportunity to own and experience digital art like never before.

These digital screens feature **customizable** frames, allowing them to perfectly complement both the artwork itself and the home that will host it.

Sunderland, UK 2025

Artists like **Svccy**, who have exhibited their works in some of the world's most spectacular locations on immersive giant screens, such as W1 Curates (London), D'strict (Seoul), and London Digital Art Week, are already experimenting with this new language, transforming the very concept of art.

Now, these same artworks can easily become part of private collections.

The future of art has arrived.
